SCHIZOPHRENIA

The WHO estimates that over

21 million

people suffer from schizophrenia, making it one of the top 10 causes of disability worldwide.³

Schizophrenia

is among the most financially costly illnesses in the world.⁴

The disease is marked by positive symptoms

hallucinations delusions

and **detusion**

blunted emotions and social

withdrawal

Schizophrenia affects people regardless of race, culture or social class. It typically starts in early adulthood, from age

20

but it can develop at any age from late teens onwards.⁶

The risk of an individual developing schizophrenia during his or her lifetime is approximately.⁶

1%

Schizophrenia is one of Lundbeck's key disease areas. Schizophrenia is a chronic, severe and disabling psychiatric disorder. The disease is characterized by distortions in thinking, perception, emotions, language, sense of self and behaviour. Common experiences include hearing voices and delusions.¹ Schizophrenia affects both men and women, although men tend to develop the condition slightly earlier in life.²
